Skills

Backend
PHP 5.4–8.5, Symfony 2.7–8.0, Ibexa DXP / eZ Publish 5+, API Platform

AI-Assisted Development
Spec-driven development

Frontend
Twig, Webpack (Symfony Encore), React (Symfony UX), TypeScript, Vanilla JS, jQuery, Bootstrap / SCSS

Mobile
Flutter, BLoC

Database
MySQL / MariaDB, Doctrine ORM

DevOps
Docker, DDEV, Linux, Platform.sh / Upsun, GitLab CI/CD

Other
Solr, Fastly, n8n, Figma (Dev Mode, design-to-code)

Languages

Hungarian: Native

English: Professional working proficiency (stronger written than spoken)

Profile

Senior Backend Engineer & Symfony Specialist with 10+ years of experience, primarily built around high-performance web applications in agency environments. In recent years, I expanded into React and Flutter, bringing a strong full-stack vision and working across the entire stack when needed.

Experience

Senior Web Developer — Webtown

Dec 2017 – Jul 2026 · Budapest · Full-time

Worked as a senior backend engineer on a portfolio of about a dozen client applications built on PHP and Symfony, ranging from greenfield projects to high-scale legacy platforms. Was responsible for architecture design, database schema planning, and modernizing existing codebases within an agile team. Over time, complemented this with React and Flutter to bridge development gaps when needed.

Web Developer / Web Software Engineer — Bemind

Nov 2014 – Oct 2017 (2 yrs 11 mos) · Veszprém · Internship → Full-time

Started with core PHP and WordPress-based web development, which made up the majority of my tenure. Over time, successfully transitioned into modern, object-oriented development as the company began adopting the Symfony framework.

Early Career — University of Pannonia

2013–2016 · Veszprém

Gained initial professional experience during my university years — developing a JavaScript-based workflow editor during a faculty internship, and maintaining a student sports-performance tracking application under a separate contract.

Selected Projects

Race Registration Platform

A recurring custom contract running since 2022, expanding with new business requirements every year. Covers the complete registration portal, online payment integration, and backoffice support — native Symfony, with a strong product-driven mindset and long-term architectural planning.

PHP · Symfony · online payment

Saudipedia — Enterprise Content Platform

A multi-layered enterprise project: custom Ibexa DXP-based CMS development and migrating 30,000+ multilingual articles from an undocumented legacy database dump, reconstructing the entire data structure and content relationships from scratch. Also includes a React/Flutter-based mobile companion app currently in beta.

PHP · Symfony · Ibexa DXP · n8n · React/Flutter (beta)

Student Sports Performance Tracking Platform

A student sports-performance tracking application originally written in native PHP, later fully modernized under a dedicated contract — systematically migrating and rewriting the legacy codebase into a modern Symfony architecture, ensuring data continuity and system stability.

PHP · Symfony · Legacy Migration · Database Refactoring

Education

Computer Science Engineering (Programtervező informatikus) — University of Pannonia, Veszprém

2010–2015 · Coursework completed (no degree conferred)
